Understanding Bone Fractures - WebMD A fracture is the medical term for a broken bone. Fractures are common; the average person has two during a lifetime. They occur when the physical force exerted on the bone is stronger than the. Fractures: Types, causes, symptoms, and treatment A fracture caused by a disease or condition is known as a pathological fracture. We examine the facts about fractures in this article. A fracture is when the continuity of a bone is broken. Broken Bone (Types of Bone Fractures) - MedicineNet Leg fractures also may involve the knee joint, and treatment depends upon the type of fracture. Similarly, fractures of the lower leg (tibia and fibula) and talus (the most proximal bone in the foot) may involve the ankle joint. Fractures and dislocations of the foot may be as complex as the hand.

Bone Fractures | Cleveland Clinic A fracture, also known as a broken bone, is a condition that changes the contour (shape) of the bone. Fractures often occur when there is a high force or impact put on a bone. Fractures are common--there are millions in the United States every year--and can be caused by a number of things. People. Bone fracture - Wikipedia A bone fracture may be the result of high force impact or stress, or a minimal trauma injury as a result of certain medical conditions that weaken the bones, such as osteoporosis, osteopenia, bone cancer, or osteogenesis imperfecta, where the fracture is then properly termed a pathologic fracture. Compression fractures of the back: MedlinePlus Medical ... Most compression fractures due to injury heal in 8 to 10 weeks with rest, wearing of a brace, and pain medicines. However, recovery can take much longer if surgery was done. Fractures due to osteoporosis often become less painful with rest and pain medicines. Some fractures, though, can lead to long-term (chronic) pain and disability.

Skull Fractures: Types, Causes, and Symptoms - Healthline There are many types of skull fractures, but only one major cause: an impact or a blow to the head that's strong enough to break the bone. Fracture | definition of fracture by Medical dictionary fracture [frak'chur] 1. the breaking of a part, especially a bone. 2. a break in continuity of bone; it may be caused by trauma, twisting due to muscle spasm or indirect loss of leverage, or by disease that results in osteopenia. See illustration. Types of fractures. Treatment. Immediate first aid consists of splinting the bone with no attempt to. Stress fractures - Symptoms and causes - Mayo Clinic Stress fractures are most common in the weight-bearing bones of the lower leg and foot. Track and field athletes and military recruits who carry heavy packs over long distances are particularly susceptible, but anyone can have a stress fracture.
